At the beginning, I have created 3 customers and only one manager for my FancyBank. Their information is as follow:

Customers:

Username: 0000   password: 0000
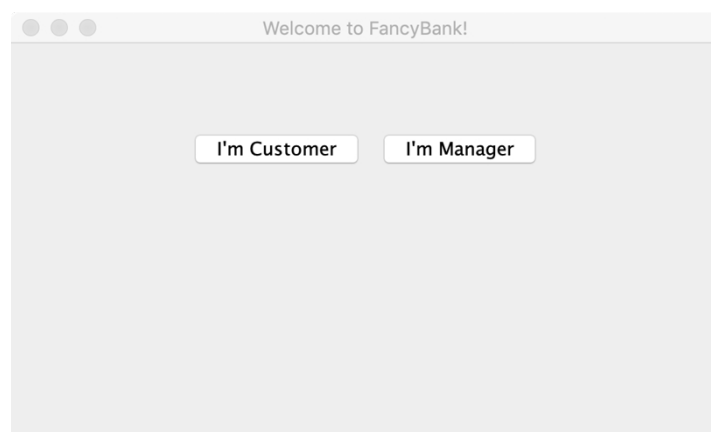

Username: 0001   password: 0001

Username: 0002   password: 0002

Manager:

Username: admin123   password: admin123

This is the initial page of FancyBank

What should be paid attention to is that all operations can be done within the same application, which means you should not run an application to login as customer and run another to login as manager. I placed many buttons for you to go back to the previous pages or logout. what you can do is after finishing the operations as one of roles and then logout to login as another role.

In the manager interface, manager can click "charge interest" button to imitate the operation of calculating new balance of saving account and loan account.
